RE: STATE WATER PROJECT RECRUITMENT AND RETENTION

Dear Mr. Byrne:

We have received a copy of your April 23, 2013 letter to Natural Resources Agency Secretary John Laird, and wish to express our agreement with your concerns regarding recruitment and retention of State Water Project (SWP) staff. This matter directly impacts one of the coequal goals described in the Delta Reform Act of 2009; i.e. "providing a more reliable water supply for California..." Promoting the achievement of the coequal goals is one of the primary responsibilities of the Delta Stewardship Council. As we describe in Chapter 3 of our Final Draft Delta Plan (see the "CVP and SWP Water Delivery Challenges" section, page 93, 3rd paragraph), the SWP has experienced a documented and growing decline in operational reliability that has directly impacted Department of Water Resources' ability to store and move water, produce electricity, and export water from the Delta when appropriate hydrological and permit conditions present themselves.

We have been following this issue for some time, and have grown increasingly troubled by the issues outlined in your letter. DWR's inability to maintain aging SWP facilities, and the resulting backlog of repair work presents an intolerable risk and expense to the millions of Californians who rely on this system. Your letter indicates that Secretary Laird is addressing these concerns, and we appreciate his efforts to resolve the underlying causes this problem. Please let me know if the Council can assist in any way.

Sincerely,

Chris Knopp, Executive Officer
Delta Stewardship Council

"Coequal goals" means the two goals of providing a more reliable water supply for California and protecting, restoring, and enhancing the Delta ecosystem. The coequal goals shall be achieved in a manner that protects and enhances the unique cultural, recreational, natural resource, and agricultural values of the Delta as an evolving place."

Joe Byrne, Chair
California Water Commission
Department of Water Resources

RE: State Water Project Recruitment and Retention

Luther Hintz
Member

Dear Secretary Laird:

Anthony Saracino
Member

At its April 17, 2013 meeting, the California Water Commission heard presentations from the Department of Water Resources (DWR), State Water Project (SWP) employees, and labor representatives detailing more examples of how the long-standing workforce recruitment and retention crisis continues to threaten the ability of the SWP to operate safely and deliver reliable water supplies to millions of Californians.

Sue Sims
Executive Officer

The Commission wishes to reiterate our strong support for action to resolve the salary compensation inequities between the SWP and other public and private utilities that are contributing to problem of maintaining a highly skilled and experienced workforce. We are greatly encouraged by reports that, thanks to your leadership on this issue, productive discussions to address these critical issues are taking place.

The salary gap between many SWP job classifications and their counterparts in other utilities continues to grow. For example, salaries for the Senior Water and Power Dispatcher classification are currently 65% below the median for other comparable positions in the industry. This pay disparity has numerous negative impacts on SWP operations and maintenance, some of which were presented to Commission at its April 2013 meeting:

- **State Water Project Reliability:** Since 2004, there has been a steady decrease in the Operational Availability of the State Water Project, due in large part to limited staff resources to perform maintenance and optimize operations. This directly reduces the SWP's ability to deliver water to agricultural and urban customers, particularly in light of pumping restrictions during certain times of the year to protect fragile ecosystems. The decreased flexibility also increases energy

costs that are then passed on to consumers and businesses. Between 2011 and 2012, the SWP incurred an additional \$70 million in energy costs through missed opportunities to pump water during less expensive, non-peak hours.

- SWP Apprentice Program: DWR conducts an extensive apprentice training program for its hydroelectric trades and crafts classifications at an average cost of \$300,000-\$400,000 for three to four years of on-the-job training. Currently, many, if not most of these individuals, leave DWR shortly after completing the program for significantly higher paying jobs at other utilities, effectively rendering DWR's investment worthless.
- Outside Contracts: There are many instances in which the SWP has entered into contracts with private companies to perform work that could be done by its own workforce. Addressing the recruitment and retention issue would allow the SWP to reduce contracting out in some areas, resulting in a savings to ratepayers.
- Thermalito Pumping Generating Plant Fire: While not a direct result of the actions of SWP staff, it is worth noting that damage from the fire which destroyed the plant in November 2012 will cost millions of dollars in lost power generation in 2013 and potentially hundreds of millions in clean-up costs and reconstruction. These impacts may have been significantly minimized with on-site staffing of the pumping plant, had adequate personnel resources been available.

The discussions at the Commission's April meeting, in addition to previous concerns that have been presented to us, present a compelling case that the inability to maintain the level of skill required to effectively operate and maintain the SWP has increased the risk of catastrophic infrastructure loss and requires immediate action. Failure to address these challenges will exacerbate a problem already costing water users millions of dollars annually in added costs for energy, water supplies, maintenance and repair, and contracting for services that could be performed by SWP employees.

We further recognize the need to evaluate options for organizational changes and improvements in business practices that will enhance the long term reliability of the SWP. These may include new governance models such as those proposed by the Little Hoover Commission in 2010 and the Public Policy Institute of California in 2011, as well as management changes that are expected to be identified in an administrative issues study being prepared for DWR.

The Honorable John Laird

April 23, 2013

The Commission thanks you for your leadership and commitment to improve the SWP's critical mission capability and to protect public and employee safety, natural resources, and the reliable delivery of water to California homes, farms and businesses.

Sincerely,

A handwritten signature in black ink, reading "Joe Byrne", is centered within a light gray rectangular box.

Joe Byrne, Chair
California Water Commission
